YOU CHOOSE

INTRODUCING
the new Pro-monitor
support from Bicci (UK)

ULT**ISO**MO

If you're familiar with our products you will
know that this support system is going to be
different to anything currently available.

This unique support system is constructed entirely of heavy
gauge aluminium and precision machined acetal polymer.

It's unique height adjustment comes from a central threaded bar
which suspends and isolates the upper part of the stand with acetal and
neoprene rubber. The adjustment system developed by *Bicci (UK)* allows the height to be set in
infinite increments between its upper and lower limits.

It's stable and strong design ensures it will easily support any medium monitor on the market.

The lower tube is easily filled with lead shot or kiln dried sand once the height has been set.
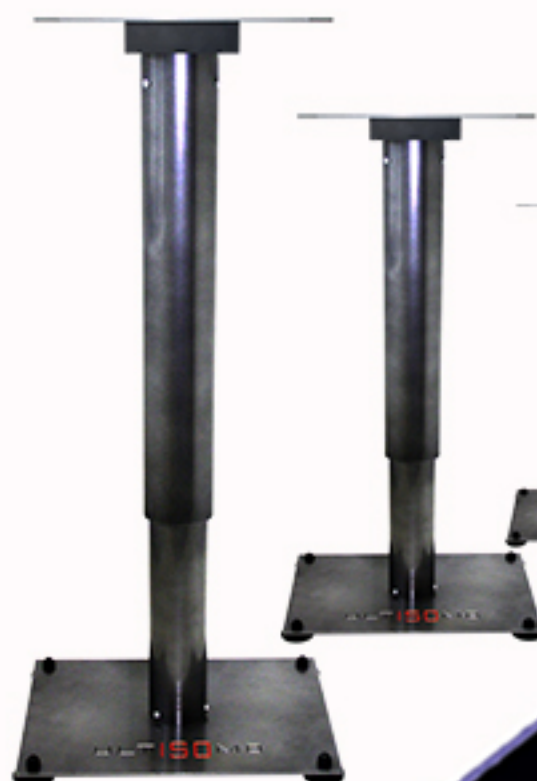

The base plate incorporates four height adjustable feet *(rubber and metal spiked feet available)*

Finished in gun metal grey or satin black the ULT**ISO**MO is one impressive stand.

To see the whole range of **micco** and ULTIMO support systems go to :
